Activate scanning on your data sources

Getting started with Cloud Compliance for Cloud Volumes ONTAP, on-premises ONTAP, or Azure NetApp Files

Complete a few steps to get started with Cloud Compliance for Cloud Volumes ONTAP, on-premises ONTAP systems, or Azure NetApp Files.

Quick start

Get started quickly by following these steps or scroll down to the remaining sections for full details.

Discover the data sources that contain the data you want to scan

Before you can scan volumes, you must add the systems to working environments in Cloud Manager:

- For Cloud Volumes ONTAP systems, these working environments should already be available in Cloud Manager
- For on-premises ONTAP systems, [Cloud Manager must discover the ONTAP clusters](#)
- For Azure NetApp Files, [Cloud Manager must be set up to discover the configuration](#).

Deploy the Cloud Compliance instance

[Deploy Cloud Compliance in Cloud Manager](#) if there isn't already an instance deployed.

Enable Cloud Compliance in your working environments and select the volumes to scan

Click **Compliance**, select the **Configuration** tab, and activate compliance scans for volumes in specific working environments.

Ensure access to volumes

Now that Cloud Compliance is enabled, ensure that it can access volumes.

- The Cloud Compliance instance needs a network connection to each Cloud Volumes ONTAP subnet, Azure NetApp Files subnet, or on-prem ONTAP system.
- Security groups for Cloud Volumes ONTAP must allow inbound connections from the Cloud Compliance instance.
- NFS volume export policies must allow access from the Cloud Compliance instance.
- Cloud Compliance needs Active Directory credentials to scan CIFS volumes.

Click **Compliance** > **Scan Configuration** > **Edit CIFS Credentials** and provide the credentials.

Manage the volumes you want to scan

Select or deselect the volumes that you want to scan and Cloud Compliance will start or stop scanning them.

Discovering the data sources that you want to scan

If the data sources you want to scan are not already in your Cloud Manager environment, you can add them to the canvas at this time.

Your Cloud Volumes ONTAP systems should already be available in the Canvas in Cloud Manager. For on-premises ONTAP systems you need to have [Cloud Manager discover these clusters](#). And for Azure NetApp Files, [Cloud Manager must be set up to discover the configuration](#).

Deploying the Cloud Compliance instance

[Deploy Cloud Compliance](#) if there isn't already an instance deployed.

Cloud Compliance can be deployed in the cloud or in an on-premises location when scanning Cloud Volumes ONTAP or on-premises ONTAP systems.

Cloud Compliance must be deployed in the cloud when scanning Azure NetApp Files volumes, and it must be deployed in the same region as the volumes you wish to scan.

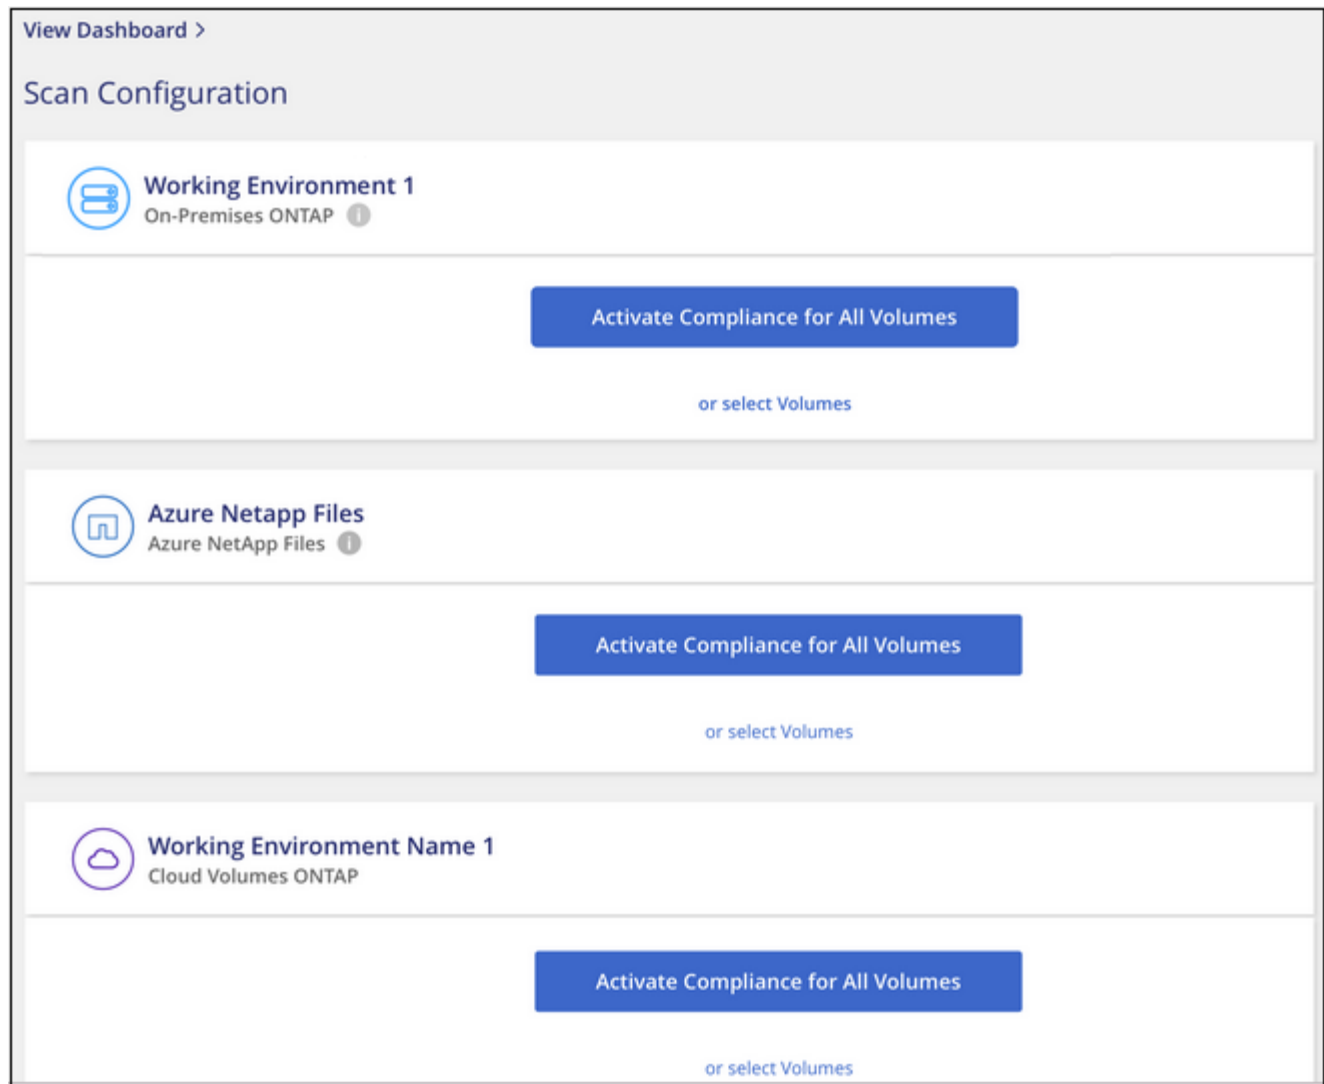

Enabling Cloud Compliance in your working environments

You can enable Cloud Compliance on Cloud Volumes ONTAP systems (in AWS and Azure), on-premises ONTAP clusters, and Azure NetApp Files.

Following these steps for on-prem ONTAP systems scans the volumes directly on the on-prem ONTAP system. If you are already creating backup files from those on-prem systems using [Cloud Backup](#), you can run compliance scans on the backup files in the cloud instead. Go to [Scanning backup files from on-premises ONTAP systems](#) to scan the volumes by scanning the backup files.

1. At the top of Cloud Manager, click **Compliance** and then select the **Configuration** tab.

2. To scan all volumes in a working environment, click **Activate Compliance for All Volumes**.

To scan only certain volumes in a working environment, click **or select Volumes** and then choose the volumes you want to scan.

See [Enabling and disabling compliance scans on volumes](#) for details.

Result

Cloud Compliance starts scanning the volumes you selected in the working environment. Results will be available in the Compliance dashboard as soon as Cloud Compliance finishes the initial scans. The time that it takes depends on the amount of data—it could be a few minutes or hours.

Verifying that Cloud Compliance has access to volumes

Make sure that Cloud Compliance can access volumes by checking your networking, security groups, and export policies. You'll need to provide Cloud Compliance with CIFS credentials so it can access CIFS volumes.

Steps

1. Make sure that there's a network connection between the Cloud Compliance instance and each network that includes volumes for Cloud Volumes ONTAP, Azure NetApp Files, or on-prem ONTAP clusters.

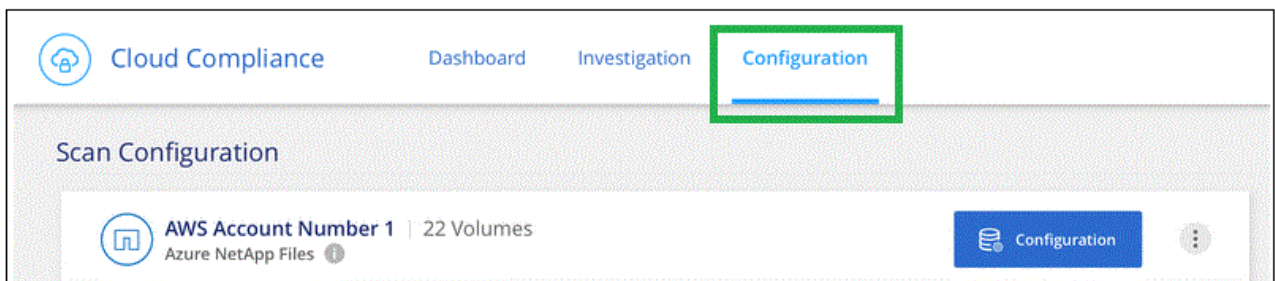

For Azure NetApp Files, Cloud Compliance can only scan volumes that are in the same region as Cloud Manager.

2. Ensure that the security group for Cloud Volumes ONTAP allows inbound traffic from the Cloud Compliance instance.

You can either open the security group for traffic from the IP address of the Cloud Compliance instance, or you can open the security group for all traffic from inside the virtual network.

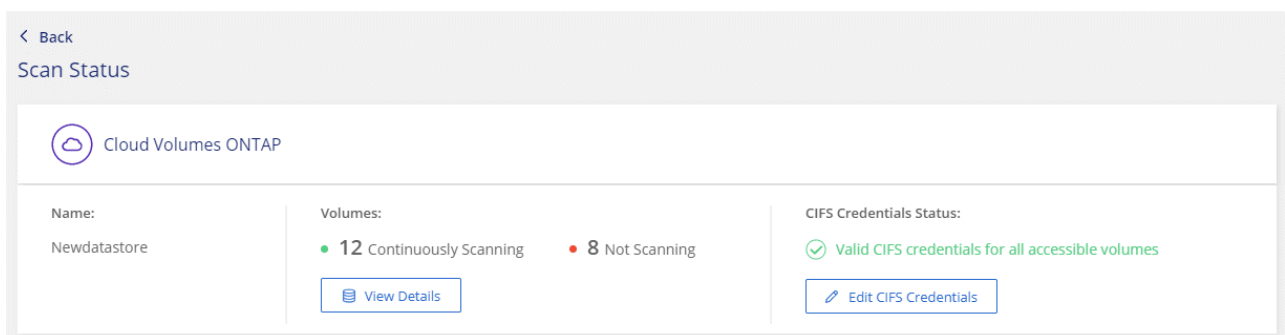

3. Ensure that NFS volume export policies include the IP address of the Cloud Compliance instance so it can access the data on each volume.
4. If you use CIFS, provide Cloud Compliance with Active Directory credentials so it can scan CIFS volumes.
 - a. At the top of Cloud Manager, click **Compliance**.
 - b. Click the **Configuration** tab.

- c. For each working environment, click **Edit CIFS Credentials** and enter the user name and password that Cloud Compliance needs to access CIFS volumes on the system.

The credentials can be read-only, but providing admin credentials ensures that Cloud Compliance can read any data that requires elevated permissions. The credentials are stored on the Cloud Compliance instance.

After you enter the credentials, you should see a message that all CIFS volumes were authenticated successfully.

5. On the *Scan Configuration* page, click **View Details** to review the status for each CIFS and NFS volume and correct any errors.

For example, the following image shows three volumes; one of which Cloud Compliance can't scan due to network connectivity issues between the Cloud Compliance instance and the volume.

< Back

Newdatastore Scan Configuration

☒ Activate Compliance for all Volumes ⓘ | 28/28 Volumes selected for compliance scan

[Edit CIFS Credentials](#)

Compliance	Name ↑↑	Protocol ↑↑	Status ↑↑	Required Action ↑↑
<input checked="" type="checkbox"/>	10.160.7.6/yuval22	NFS	Continuously Scanning	
<input checked="" type="checkbox"/>	10.160.7.6/yuvalnewtarget	NFS	Continuously Scanning	
<input checked="" type="checkbox"/>	\\10.160.7.6\Danny_share	CIFS	No Access	The CIFS credentials that you provided have expired. Edit the CIFS credential...

Enabling and disabling compliance scans on volumes

You can stop or start scanning volumes in a working environment at any time from the Scan Configuration page. We recommend that you scan all volumes.

< Back

Newdatastore Scan Configuration

☐ Activate Compliance for all Volumes ⓘ | 27/28 Volumes selected for compliance scan

[Add CIFS Credentials](#)

Compliance	Volume Name ↑↑	Status	Required Action
<input type="checkbox"/>	VolumeName1	Not Scanning	Add CIFS Credentials ⓘ
<input checked="" type="checkbox"/>	VolumeName2	Continuously Scanning	
<input type="checkbox"/>	VolumeName3	Not Scanning	
<input checked="" type="checkbox"/>	VolumeName4	Continuously Scanning	
<input checked="" type="checkbox"/>	VolumeName5	Continuously Scanning	

To:	Do this:
Disable scanning for a volume	Move the volume slider to the left
Disable scanning for all volumes	Move the Activate Compliance for all Volumes slider to the left
Enable scanning for a volume	Move the volume slider to the right
Enable scanning for all volumes	Move the Activate Compliance for all Volumes slider to the right

New volumes added to the working environment are automatically scanned only when the **Activate Compliance for all Volumes** setting is enabled. When this setting is disabled, you'll need to activate scanning on each new volume you create in the working environment.

Scanning backup files from on-premises ONTAP systems

If you don't want Cloud Compliance to scan volumes directly on your on-prem ONTAP systems, a new Beta feature released in January 2021 allows you to run compliance scans on backup files created from your on-

prem ONTAP volumes. So if you are already creating backup files using [Cloud Backup](#), you can use this new feature to run compliance scans on those backup files.

The Compliance scans you run on backup files are **free** - no Cloud Compliance subscription or license is needed.

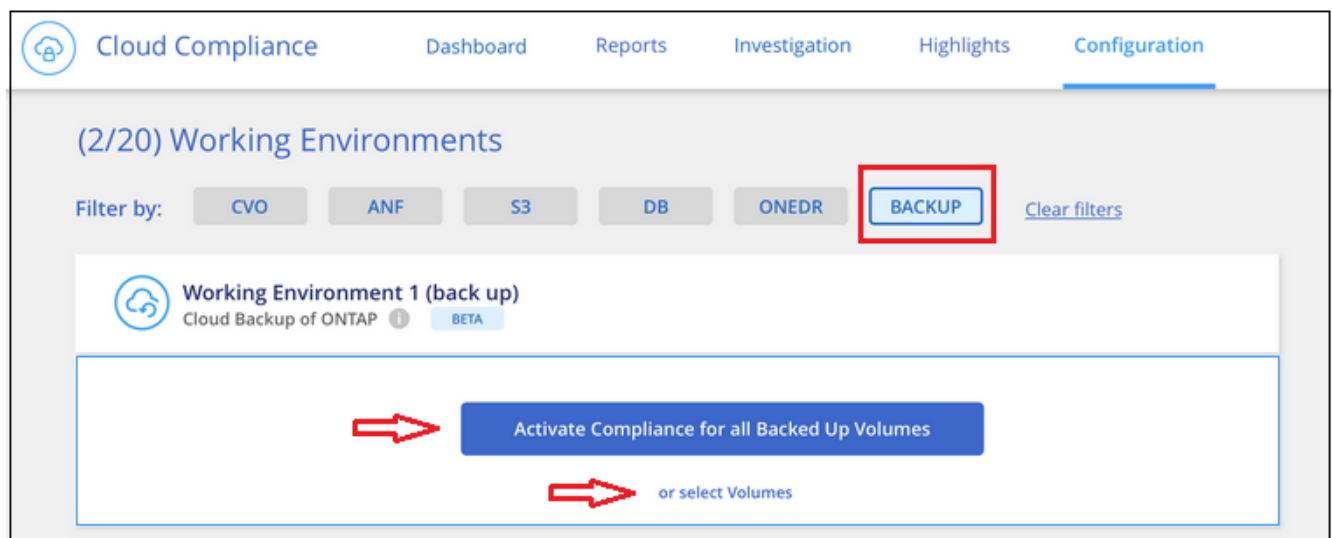

Note: When Compliance scans backup files it uses permissions granted through the Restore instance to access the backup files. Typically the Restore instance powers down when not actively restoring files, but it remains on when scanning backup files. See [more information about the Restore instance](#).

Steps

If you want to scan the backup files from on-prem ONTAP systems:

1. At the top of Cloud Manager, click **Compliance** and then select the **Configuration** tab.
2. From the list of working environments, click the **BACKUP** button from the list of filters.

All the on-premises ONTAP working environments that have backup files are listed. If you don't have any backup files in an on-prem system, then the working environment is not shown.

3. To scan all backed up volumes in a working environment, click **Activate Compliance for all backed up Volumes**.

To scan only certain backed up volumes in a working environment, click **or select Volumes** and then choose the backup files (volumes) that you want to scan.

See [Enabling and disabling compliance scans on volumes](#) for details.

Scanning on-prem volumes versus backups of those volumes

When you view the entire list of working environments you will see two listings for each on-prem cluster if they have backed up files.

Working Environment 1

On-Premises ONTAP ⓘ

1

Activate Compliance for All Volumes

or select Volumes

Working Environment 1 (back up)

Cloud Backup of ONTAP ⓘ BETA

2

Activate Compliance for all backed up Volumes

or select Volumes

The first item is the on-prem cluster and the actual volumes.

The second item is the backup files from that same on-prem cluster.

Choose the first option to scan the volumes on the on-prem system. Choose the second option to scan the backup files from those volumes. Do not scan both on-prem volumes and backup files of the same cluster.

Scanning data protection volumes

By default, data protection (DP) volumes are not scanned because they are not exposed externally and Cloud Compliance cannot access them. These are the destination volumes for SnapMirror operations from an on-premises ONTAP system or from a Cloud Volumes ONTAP system.

Initially, the volume list identifies these volumes as *Type DP* with the *Status Not Scanning* and the *Required Action Enable Access to DP volumes*.

'Working Environment Name' Scan Configuration

Activate Compliance for all Volumes ⓘ

22/28 Volumes selected for compliance scan

Enable Access to DP Volumes

Edit CIFS Credentials

Compliance	Volume Name	Type	Status	Required Action
<input type="checkbox"/>	VolumeName1	DP	Not Scanning	Enable access to DP Volumes ⓘ
<input checked="" type="checkbox"/>	VolumeName2	NFS	Continuously Scanning	
<input type="checkbox"/>	VolumeName3	CIFS	Not Scanning	

Steps

If you want to scan these data protection volumes:

- Click the **Enable Access to DP volumes** button at the top of the page.
- Review the confirmation message and click **Enable Access to DP volumes** again.
 - Volumes that were initially created as NFS volumes in the source ONTAP system are enabled.

- Volumes that were initially created as CIFS volumes in the source ONTAP system require that you enter CIFS credentials to scan those DP volumes. If you already entered Active Directory credentials so that Cloud Compliance can scan CIFS volumes you can use those credentials, or you can specify a different set of Admin credentials.

Provide Active Directory Credentials

☒ Use existing CIFS Scanning Credentials (user1@domain2) ☐ Use Custom Credentials

Active Directory Domain ¹ DNS IP Address ¹

DP Volumes, created from a SnapMirror relationship, do not allow external access by default. Continuing will create NFS shares from DP Volumes which have been activated for Compliance. The shares' export policies will allow access only from the Cloud Compliance instance. [Learn More](#)

Enable Access to DP Volumes Cancel

Provide Active Directory Credentials

☐ Use existing CIFS Scanning Credentials (user1@domain2) ☒ Use Custom Credentials

Username ¹ Password

Active Directory Domain ¹ DNS IP Address ¹

DP Volumes, created from a SnapMirror relationship, do not allow external access by default. Continuing will create NFS shares from DP Volumes which have been activated for Compliance. The shares' export policies will allow access only from the Cloud Compliance instance. [Learn More](#)

Enable Access to DP Volumes Cancel

3. Activate each DP volume that you want to scan [the same way you enabled other volumes](#), or use the **Activate Compliance for all Volumes** control to enable all volumes, including all DP volumes.

Result

Once enabled, Cloud Compliance creates an NFS share from each DP volume that was activated for Compliance so that it can be scanned. The share export policies only allow access from the Cloud Compliance instance.

Note: If you had no CIFS data protection volumes when you initially enabled access to DP volumes, and later add some, the button **Enable Access to CIFS DP** appears at the top of the Scan Configuration page. Click this button and add CIFS credentials to enable access to these CIFS DP volumes.

Getting started with Cloud Compliance for Amazon S3

Cloud Compliance can scan your Amazon S3 buckets to identify the personal and sensitive data that resides in S3 object storage. Cloud Compliance can scan any bucket in the account, regardless if it was created for a NetApp solution.

Quick start

Get started quickly by following these steps, or scroll down to the remaining sections for full details.

Set up the S3 requirements in your cloud environment

Ensure that your cloud environment can meet the requirements for Cloud Compliance, including preparing an IAM role and setting up connectivity from Cloud Compliance to S3. [See the complete list.](#)

Deploy the Cloud Compliance instance

[Deploy Cloud Compliance](#) if there isn't already an instance deployed.

Activate Compliance on your S3 working environment

Select the Amazon S3 working environment, click **Enable Compliance**, and select an IAM role that includes the required permissions.

Select the buckets to scan

Select the buckets that you'd like to scan and Cloud Compliance will start scanning them.

Reviewing S3 prerequisites

The following requirements are specific to scanning S3 buckets.

Set up an IAM role for the Cloud Compliance instance

Cloud Compliance needs permissions to connect to the S3 buckets in your account and to scan them. Set up an IAM role that includes the permissions listed below. Cloud Manager prompts you to select an IAM role when you enable Cloud Compliance on the Amazon S3 working environment.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "s3:Get*",
        "s3:List*",
        "s3:PutObject",
        "s3:HeadBucket"
      ],
      "Resource": "*"
    },
    {
      "Effect": "Allow",
      "Action": [
        "iam:GetPolicyVersion",
        "iam:GetPolicy",
        "iam:ListAttachedRolePolicies"
      ],
      "Resource": [
        "arn:aws:iam::*:policy/*",
        "arn:aws:iam::*:role/*"
      ]
    }
  ]
}
```

Provide connectivity from Cloud Compliance to Amazon S3

Cloud Compliance needs a connection to Amazon S3. The best way to provide that connection is through a VPC Endpoint to the S3 service. For instructions, see [AWS Documentation: Creating a Gateway Endpoint](#).

When you create the VPC Endpoint, be sure to select the region, VPC, and route table that corresponds to the Cloud Compliance instance. You must also modify the security group to add an outbound HTTPS rule that enables traffic to the S3 endpoint. Otherwise, Cloud Compliance can't connect to the S3 service.

If you experience any issues, see [AWS Support Knowledge Center: Why can't I connect to an S3 bucket using a gateway VPC endpoint?](#)

An alternative is to provide the connection by using a NAT Gateway.

You can't use a proxy to get to S3 over the internet.

Deploying the Cloud Compliance instance

[Deploy Cloud Compliance in Cloud Manager](#) if there isn't already an instance deployed.

You need to deploy the instance in an AWS Connector so that Cloud Manager automatically discovers the S3 buckets in this AWS account and displays them in an Amazon S3 working environment.

Note: Deploying Cloud Compliance in an on-premises location is not currently supported when scanning S3 buckets.

Activating Compliance on your S3 working environment

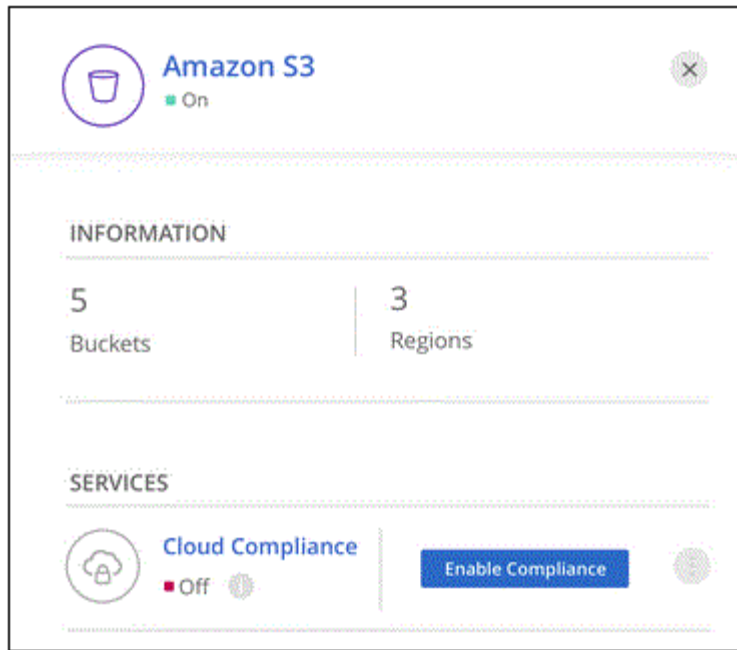

Enable Cloud Compliance on Amazon S3 after you verify the prerequisites.

Steps

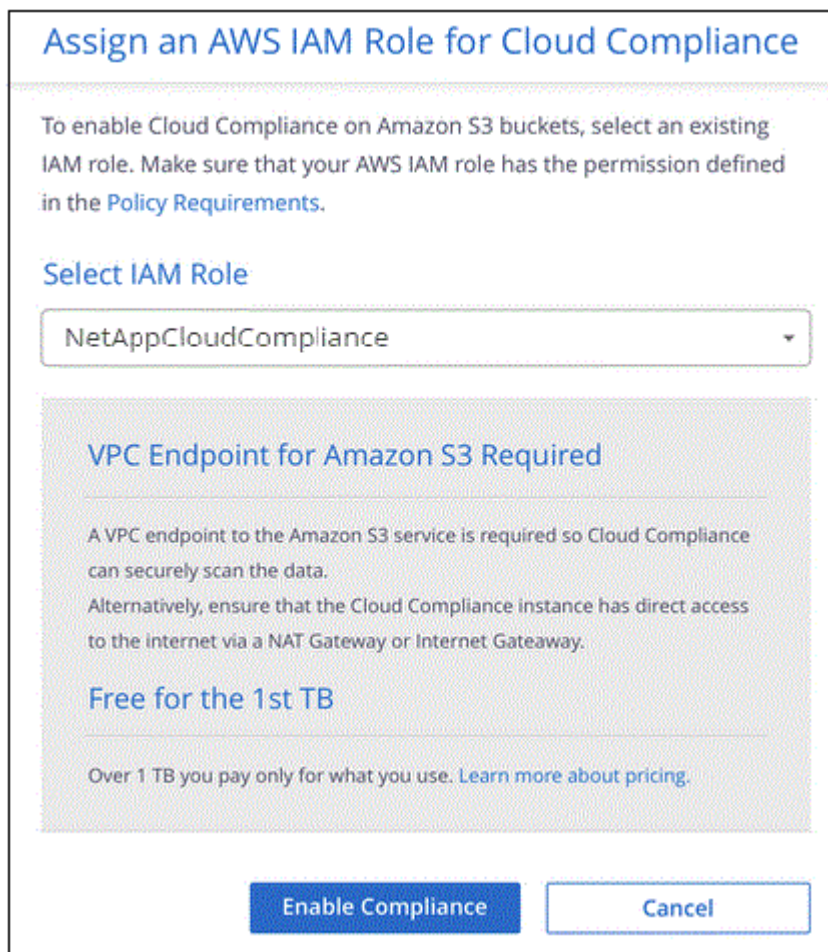

1. At the top of Cloud Manager, click **Canvas**.
2. Select the Amazon S3 working environment.

3. In the pane on the right, click **Enable Compliance**.

4. When prompted, assign an IAM role to the Cloud Compliance instance that has [the required permissions](#).

5. Click **Enable Compliance**.

You can also enable compliance scans for a working environment from the Scan Configuration page by clicking the  button and selecting **Activate Compliance**.

Result

Cloud Manager assigns the IAM role to the instance.

Enabling and disabling compliance scans on S3 buckets

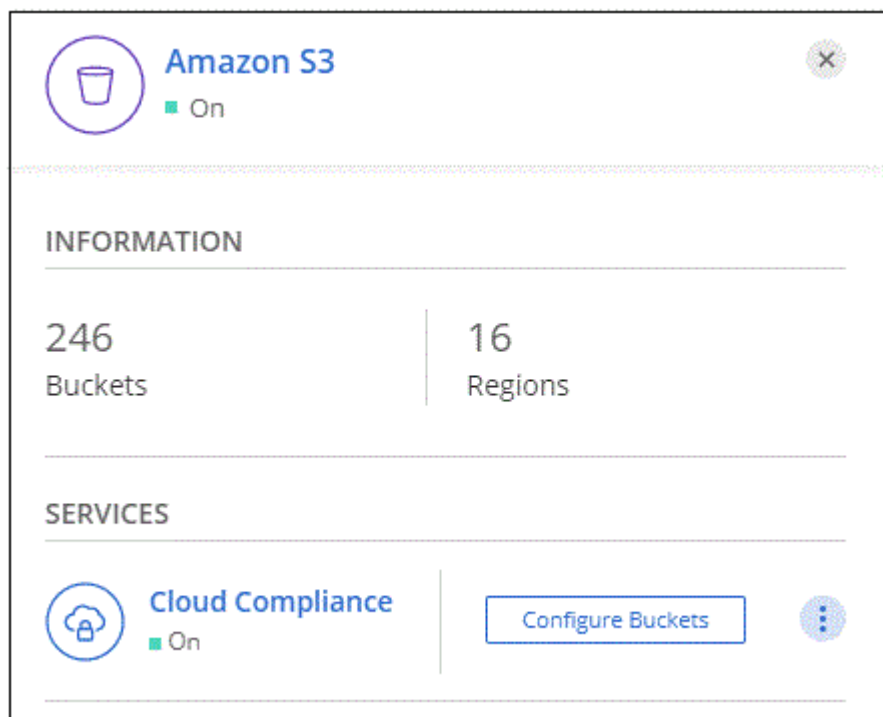

After Cloud Manager enables Cloud Compliance on Amazon S3, the next step is to configure the buckets that you want to scan.

When Cloud Manager is running in the AWS account that has the S3 buckets you want to scan, it discovers those buckets and displays them in an Amazon S3 working environment.

Cloud Compliance can also [scan S3 buckets that are in different AWS accounts](#).

Steps

1. Select the Amazon S3 working environment.
2. In the pane on the right, click **Configure Buckets**.

3. Enable compliance on the buckets that you want to scan.

Cloud Compliance			
<div> <div>< Back</div> <div>Amazon S3 Scan Configuration</div> <div>15/28 Buckets in Scan Scope. Toggle ON/OFF to enable Compliance per Bucket</div> </div>			
Compliance	Bucket Name	Status	Required Action
<input checked="" type="checkbox"/>	BucketName1	Not Scanning	Add Credentials
<input checked="" type="checkbox"/>	BucketName2	Continuously Scanning	
<input type="checkbox"/>	BucketName3	Not Scanning	

Result

Cloud Compliance starts scanning the S3 buckets that you enabled. If there are any errors, they'll appear in the Status column, alongside the required action to fix the error.

Scanning buckets from additional AWS accounts

You can scan S3 buckets that are under a different AWS account by assigning a role from that account to access the existing Cloud Compliance instance.

Steps

- Go to the target AWS account where you want to scan S3 buckets and create an IAM role by selecting **Another AWS account**.

Create role

Select type of trusted entity

AWS service
 EC2, Lambda and others

Another AWS account
 Belonging to you or 3rd party

Web identity
 Cognito or any OpenID provider

SAML 2.0 federation
 Your corporate directory

Allows entities in other accounts to perform actions in this account. [Learn more](#)

Specify accounts that can use this role

Account ID*

- Options
- ☐ Require external ID (Best practice when a third party will assume this role)
 - ☐ Require MFA

Be sure to do the following:

- Enter the ID of the account where the Cloud Compliance instance resides.
- Change the **Maximum CLI/API session duration** from 1 hour to 12 hours and save that change.
- Attach the Cloud Compliance IAM policy. Make sure it has the required permissions.

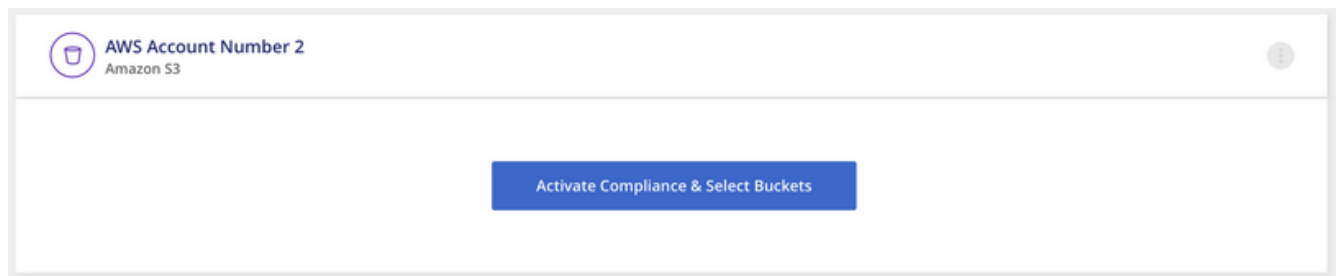

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "s3:Get*",
        "s3:List*",
        "s3:PutObject",
        "s3:HeadBucket"
      ],
      "Resource": "*"
    }
  ]
}
```

2. Go to the source AWS account where the Cloud Compliance instance resides and select the IAM role that is attached to the instance.
 - a. Change the **Maximum CLI/API session duration** from 1 hour to 12 hours and save that change.
 - b. Click **Attach policies** and then click **Create policy**.
 - c. Create a policy that includes the "sts:AssumeRole" action and the ARN of the role that you created in the target account.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "sts:AssumeRole",
      "Resource": "arn:aws:iam::<ADDITIONAL-ACCOUNT-ID>:role/<ADDITIONAL_ROLE_NAME>"
    },
    {
      "Effect": "Allow",
      "Action": [
        "iam:GetPolicyVersion",
        "iam:GetPolicy",
        "iam:ListAttachedRolePolicies"
      ],
      "Resource": [
        "arn:aws:iam::*:policy/*",
        "arn:aws:iam::*:role/*"
      ]
    }
  ]
}
```

The Cloud Compliance instance profile account now has access to the additional AWS account.

3. Go to the **Amazon S3 Scan Configuration** page and the new AWS account is displayed. Note that it can take a few minutes for Cloud Compliance to sync the new account's working environment and show this information.

4. Click **Activate Compliance & Select Buckets** and select the buckets you want to scan.

Result

Cloud Compliance starts scanning the new S3 buckets that you enabled.

Scanning database schemas

Complete a few steps to start scanning your database schemas with Cloud Compliance.

Quick start

Get started quickly by following these steps or scroll down to the remaining sections for full details.

Review database prerequisites

Ensure that your database is supported and that you have the information necessary to connect to the database.

Deploy the Cloud Compliance instance

Deploy [Cloud Compliance](#) if there isn't already an instance deployed.

Add the database server

Add the database server that you want to access.

Select the schemas

Select the schemas that you want to scan.

Reviewing prerequisites

Review the following prerequisites to make sure that you have a supported configuration before you enable Cloud Compliance.

Supported databases

Cloud Compliance can scan schemas from the following databases:

- MongoDB
- MySQL
- Oracle
- PostgreSQL
- SAP HANA
- SQL Server (MSSQL)

The statistics gathering feature **must be enabled** in the database.

Database requirements

Any database with connectivity to the Cloud Compliance instance can be scanned, regardless of where it is hosted. You just need the following information to connect to the database:

- IP Address or host name

- Port
- Service name (only for accessing Oracle databases)
- Credentials that allow read access to the schemas

When choosing a user name and password, it's important to choose one that has full read permissions to all the schemas and tables you want to scan. We recommend that you create a dedicated user for the Cloud Compliance system with all the required permissions.

Note: For MongoDB, a read-only Admin role is required.

Adding the database server

You must have [deployed an instance of Cloud Compliance in Cloud Manager already](#).

Add the database server where the schemas reside.

1. From the Working Environments Configuration page, click **Add Data Source > Add Database Server**.

2. Enter the required information to identify the database server.
 - a. Select the database type.
 - b. Enter the port and the host name or IP address to connect to the database.
 - c. For Oracle databases, enter the Service name.
 - d. Enter the credentials so that Cloud Compliance can access the server.
 - e. Click **Add DB Server**.

Add DB Server

To activate Compliance on Databases, first add a Database Server. After this step, you'll be able to select which Database Schemas you would like to activate Compliance for.

Database

Database Type	Host Name or IP Address
<input type="text"/>	<input type="text"/>
Port	Service Name
<input type="text"/>	<input type="text"/>

Credentials

Username	Password
<input type="text"/>	<input type="text"/>

The database is added to the list of working environments.

Enabling and disabling compliance scans on database schemas

You can stop or start scanning schemas at any time.

1. From the *Scan Configuration* page, click the **Configuration** button for the database you want to configure.

Scan Configuration

 **Oracle DB 1** | 41 Schemas
Oracle

 Configuration 

 No Schemas selected for Compliance

 7
Not Scanning
[View Details](#)

2. Select the schemas that you want to scan by moving the slider to the right.

Working Environment Name' Scan Configuration			
28/28 Schemas selected for compliance scan		<input type="text"/> Edit Credentials	
Compliance	Schema Name	Status	Required Action
<input checked="" type="checkbox"/>	DB1 - SchemaName1	Not Scanning	Add Credentials ⓘ
<input checked="" type="checkbox"/>	DB1 - SchemaName2	Continuously Scanning	
<input checked="" type="checkbox"/>	DB1 - SchemaName3	Continuously Scanning	
<input checked="" type="checkbox"/>	DB1 - SchemaName4	Continuously Scanning	

Result

Cloud Compliance starts scanning the database schemas that you enabled. If there are any errors, they'll appear in the Status column, alongside the required action to fix the error.

Scanning OneDrive accounts

Complete a few steps to start scanning files in your user's OneDrive folders with Cloud Compliance.

Quick start

Get started quickly by following these steps or scroll down to the remaining sections for full details.

1

Review OneDrive prerequisites

Ensure that you have the Admin credentials to log into the OneDrive account.

2

Deploy the Cloud Compliance instance

[Deploy Cloud Compliance](#) if there isn't already an instance deployed.

3

Add the OneDrive account

Using Admin user credentials, log into the OneDrive account that you want to access so that it is added as a new working environment.

4

Add the users

Add the list of users from the OneDrive account that you want to scan. You can add up to 100 users at time.

Reviewing prerequisites

Review the following prerequisites to make sure that you have a supported configuration before you enable Cloud Compliance.

OneDrive requirements

You must have the Admin login credentials for the OneDrive for Business account that provides read access to all user files.

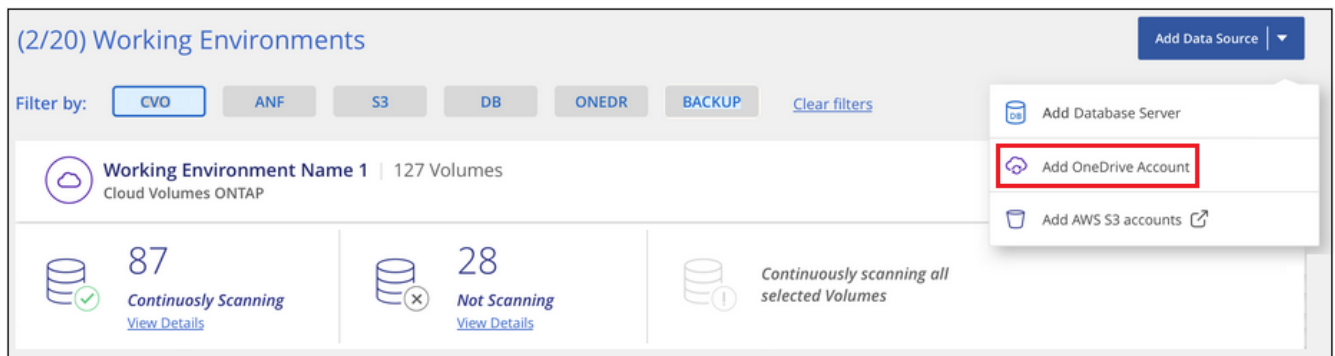

You will need a line-separated list of the email addresses for all the users whose OneDrive folders you want to scan.

Adding the OneDrive account

You must have [deployed an instance of Cloud Compliance in Cloud Manager already](#).

Add the OneDrive account where the user files reside.

1. From the Working Environments Configuration page, click **Add Data Source > Add OneDrive Account**.

2. In the Add a OneDrive account dialog, click **Sign in to OneDrive**.
3. In the Microsoft page that appears, select the OneDrive account and enter the required Admin user and password, then click **Accept** to allow Cloud Compliance to read data from this account.

The OneDrive account is added to the list of working environments.

Adding OneDrive users to compliance scans

You can add individual OneDrive users, or all of your OneDrive users, so that their files will be scanned by Cloud Compliance.

1. From the *Scan Configuration* page, click the **Configuration** button for the OneDrive account.

2. If this is the first time adding users for this OneDrive account, click **Add your first OneDrive users**.

'Working Environment Name' Scan Configuration

No OneDrive users are being scanned

[+ Add your first OneDrive users](#)

If you are adding additional users, click **Add OneDrive users**.

'Working Environment Name' Scan Configuration

24 users are being scanned for compliance

[+ Add OneDrive users](#)

Username	Status	Required Action
user2@example.com	Continuosly Scanning	...
user3@example.com	Continuosly Scanning	...

3. Add the email addresses for the users whose files you want to scan - one email address per line (up to 100 maximum per session) - and click **Add Users**.

Add OneDrive users

Provide a list of OneDrive users for Cloud Compliance to scan their data, line-separated. You can add up to 100 users at a time.

Type or paste below the OneDrive user accounts to add

User Accounts

user@example.com

user@example.com

user@example.com

user@example.com

user@example.com

user@example.com

user@example.com

[Add Users](#) [Cancel](#)

A confirmation dialog displays the number of users who were added.

If the dialog lists any users who could not be added, capture this information so that you can resolve the issue. In some cases you can re-add the user with a corrected email address.

Result

Cloud Compliance starts scanning the files for the users you added, and the results are displayed in the Dashboard and in other locations.

Removing OneDrive users from compliance scans

If users leave the company or if their email address changes, you can remove individual OneDrive users from having their files scanned at any time. Just click **Remove OneDrive User** from the Configuration page.

'Working Environment Name' Scan Configuration

+ Add OneDrive users

24 users are being scanned for compliance

Username	Status	Required Action
user1@example.com	● Continuously Scanning	<div>⋮<div>Remove OneDrive User</div></div>
